ABOUT ME

I am a Computer Science student at Fatima Jinnah Women University, Rawalpindi (2023–2027). I enjoy building things — websites, secure apps, and data tools — and I like figuring out how systems work (and how they can break). My main interests are **cybersecurity**, especially SQL injection defence, and **web development**. I am always happy to learn something new and meet people who love tech.

EXPERIENCE

Brand Ambassador

DataCrumbs · Karachi

May 2026 – Present

- Representing DataCrumbs and helping spread awareness about their work. Currently ongoing.

Web Development Intern

BrosOutlet LLC · Rawalpindi

Dec 2025 – Jan 2026

- Worked on the official company website — building and maintaining web pages.
- Practised teamwork, clear communication, and meeting deadlines in a real work setting.

Cybersecurity Bootcamp Participant & Project Developer

DevTown · Online (Asia)

Aug 2025

- Completed an intensive bootcamp focused on SQL Injection Defence and Application Security.
- Found, tested, and fixed SQL injection vulnerabilities in web applications.
- Built a working project demonstrating real-world defence mechanisms.
- Followed industry best practices endorsed by Microsoft and Google Developer Groups.

Data Analytics Job Simulation

Deloitte · Online

Jul 2025

- Completed practical tasks in data analysis and forensic technology.
- Used Tableau to create dashboards and turn numbers into clear visuals.
- Gained real-world analytics experience through Deloitte's simulation programme.

REFLECTIONS

What I have learned so far

Each experience taught me something different. The cybersecurity bootcamp showed me that security is not just theory — you have to actually break things and fix them to truly understand. The internship taught me that real projects are messier than classroom ones, and that communicating well with teammates matters just as much as writing good code. The Deloitte simulation showed me how data can tell a clear story when presented well.

What I am working on next

I want to go deeper into cybersecurity — especially network security and intrusion detection. I also want to keep building projects that combine secure coding with good user experience. By the time I graduate in 2027, I hope to have a strong portfolio and real-world skills I can use straight away.

What kind of person I am at work

I like to understand things properly before I build them. I ask questions, take notes, and I am not afraid to say 'I don't know yet, but I will find out.' I enjoy working with others and I believe the best solutions come from combining different ideas.

SKILLS

- | | | |
|-------------------------|---------------------------|----------------------|
| ● SQL Injection Defence | ● Application Security | ● Network Security |
| ● Web Development | ● HTML / CSS / JavaScript | ● Python |
| ● Tableau | ● Data Analysis | ● NLP (learning) |
| ● ML / DL (learning) | ● Secure Coding | ● Team Collaboration |
